

PRATIK KARANJE

Engineering Leader | Solutions Architect | Python Backend & AWS Cloud Platforms

+91 902 873 5097 • pratikkaranje03@gmail.com • github.com/pkaranje • linkedin.com/in/pratikkaranje • Pune, India

PROFESSIONAL SUMMARY

Engineering Lead and Solution Architect with 12+ years of experience building backend platforms, SaaS products, and cloud-native applications using Python and AWS technologies.

Over the years, I've worked across healthcare, IoT, product engineering, and open-source environments, contributing to backend systems, platform development, cloud solutions, and engineering delivery.

I enjoy solving backend and platform engineering challenges, mentoring developers, collaborating with cross-functional teams, and building reliable systems that align with both product and business goals.

KEY ACHIEVEMENTS TECHNICAL SKILLS

- Delivered SaaS products and backend platforms from concept and MVP to production deployment across healthcare, IoT, and cloud-based applications.
- Led engineering teams of 4–16 members through roadmap planning, sprint execution, mentoring, and cross-functional delivery initiatives.
- Built and maintained CI/CD pipelines using GitHub Actions and CircleCI, improving deployment consistency and release reliability.
- Collaborated with engineering teams, stakeholders, and clients across US, Europe, and APAC regions on backend platform and cloud engineering initiatives.
- Drove adoption of AI-assisted development tools including Claude Code, Cursor AI, ChatGPT, and GitHub Copilot to improve debugging, documentation, and engineering productivity.
- Contributed to open-source engineering initiatives including the serverless-wsgi plugin adopted across production serverless applications worldwide (500+ GitHub stars).

TECHNICAL SKILLS

- **Languages & Backend:** Python (Primary), Flask, Django, Go, Node.js, TypeScript, REST APIs, GraphQL
- **Cloud & AWS:** AWS Lambda, API Gateway, DynamoDB, SQS, SNS, S3, EC2, RDS, CloudWatch, Redshift
- **Architecture:** Layered Architecture, Domain-Oriented Design, Clean Architecture, Hexagonal Architecture, Microservices Concepts
- **Data & Databases:** PostgreSQL, DynamoDB, PySpark, Apache Hudi, Hive
- **CI/CD & DevOps:** GitHub Actions, CircleCI, Terraform (Basic), Datadog, CloudWatch
- **AI-Assisted Development:** Claude Code, Cursor AI, ChatGPT, GitHub Copilot
- **Frontend:** Angular, Ionic, React
- **Collaboration & Delivery:** Agile/Scrum, Jira, Confluence, Git, GitHub, Code Reviews, Technical Mentorship

CERTIFICATIONS

- **Kaggle :** Python, Pandas
- **Currently Pursuing:** Generative AI, Agentic AI

PROFESSIONAL EXPERIENCE

Software Engineer (Platform & Backend) — [The Linux Foundation](#)

Nov 2019 – Present

- Developed and maintained AWS serverless backend applications using Python, AWS Lambda, API Gateway, DynamoDB, SQS, SNS, and PostgreSQL.
- Built REST and GraphQL APIs supporting modular backend integrations and scalable feature development across engineering teams.
- Contributed to backend modernization initiatives improving application maintainability, deployment workflows, and engineering efficiency.
- Built and maintained CI/CD pipelines using GitHub Actions and CircleCI to automate testing, deployment, and release workflows.
- Supported cloud deployment workflows and backend engineering processes with basic Terraform exposure.
- Collaborated with global stakeholders, engineering teams, and open-source contributors across distributed teams and time zones.
- Authored and maintained unit and integration tests while improving engineering quality through structured peer code reviews.
- Leveraged AI-assisted development tools including Claude Code, Cursor AI, ChatGPT, and GitHub Copilot to improve debugging, documentation, and engineering productivity.
- Contributed fixes and enhancements to the open-source serverless-wsgi plugin enabling Flask/Django deployments on AWS Lambda across production systems.
- Monitored application health and reliability using AWS CloudWatch and Datadog for logs, metrics, and observability workflows.

Associate Tech Lead / Senior Developer — [Equations Work](#) | [LiveHealth](#) | [iauro Systems](#)

2013 – 2019

- Awarded **“Most Dedicated Software Professional”** at **Equations Work** for consistent delivery excellence and engineering contributions.
- Built and maintained backend platforms and distributed application services for healthcare, SaaS, IoT, and product-based applications using Django, Node.js, Angular, and PostgreSQL.
- Led engineering teams through sprint planning, technical delivery, code reviews, mentoring, and backend architecture discussions.
- Designed scalable REST and GraphQL APIs supporting responsive web applications and backend integrations.
- Collaborated with stakeholders to translate business requirements into scalable backend and platform solutions.
- Mentored junior developers through backend design discussions, Agile engineering practices, and peer code reviews.
- Contributed to engineering process improvements focused on maintainability, scalability, and delivery efficiency.

KEY PROJECTS

Education Platforms — [The Linux Foundation](#) | *Python, Flask, PostgreSQL, Angular, Go, Nodejs*

- Built scalable backend platform services supporting distributed engineering workflows and frontend integrations for Linux Foundation education platforms.
- Designed backend systems enabling modular feature delivery, certification and training workflows, reservation management, proctoring integrations, credential verification, and coupon management capabilities.
- Developed Node.js-based integration BFF services enabling communication between Angular frontend applications and Python backend services to support seamless platform operations and user experiences.

Insights Data Lake Platform — The Linux Foundation | *Python, Go, Apache Hudi, Hive, AWS RDS/Redshift*

- Built end-to-end analytics and data ingestion pipelines generating near real-time engagement insights for open-source ecosystem stakeholders.
- Designed scalable data workflows supporting reporting dashboards, contributor analytics, engineering metrics, and community growth insights using Apache Hudi, Hive, PySpark, and AWS Redshift.
- Implemented ingestion and transformation layers using AWS Kinesis Firehose, EMR, S3, and custom JSON/CSV-based pipelines enabling structured analytics and reporting workflows across Linux Foundation platforms.

SPDX (Software Package Data Exchange) — The Linux Foundation | *Go*

- Contributed to open-standard initiatives supporting Software Bill of Materials (SBOM) generation and software license tracking across enterprise supply chains.
- Supported tooling and specification contributions enabling organizations to manage open-source dependencies and license compliance workflows.

Serverless WSGI Plugin — Open Source Contributor | *Python, AWS Lambda*

- Contributed fixes and enhancements to the serverless-wsgi plugin improving query parameter handling, Express Gateway compatibility, and AWS Lambda request normalization workflows.
- Implemented query string parsing and encoding improvements supporting ALB events, multi-value query parameters, and consistent request handling across serverless integrations.
- Contributions adopted across production serverless applications globally within the AWS serverless open-source ecosystem (500+ GitHub stars).

Quid (Healthcare Analytics Platform) — iauru Systems | *Node.js, MySQL, Angular*

- Built and maintained a SaaS healthcare analytics platform delivering quarterly and monthly market research insights through structured reporting dashboards.
- Designed backend services supporting complex data aggregation, filtering, reporting, and visualization workflows for enterprise healthcare clients.

TruckX (Fleet Management System) — iauru Systems | *Python, Django, MySQL, Angular, Ionic*

- Built backend systems for a SaaS IoT fleet management platform supporting compliance tracking, load dispatching, geofencing, HOS alerts, and audit reporting workflows.
- Designed and maintained REST APIs supporting real-time fleet operations, mobile application integrations, and enterprise reporting systems.

Kube M2M (Cranes Monitoring System) — Equations Work | *Python, Django, MySQL, Angular, Ionic*

- Built backend services for a SaaS IoT industrial crane monitoring platform supporting operational tracking, machine monitoring, and real-time notification workflows.
- Developed backend integrations and monitoring systems enabling mobile and web-based visibility into crane operations, machine states, and operational alerts.

EDUCATION

Bachelor of Engineering, Information Technology Smt. Kashibai Navale COE, Pune	<i>2009 – 2012</i>
Diploma, Computer Technology Sou. Venutai Chavan Polytechnic, Pune	<i>2006 – 2009</i>
10th, Computer Technology New English School Tilak Road, Pune	<i>2005 – 2006</i>

LANGUAGE

- **English** (Professional)
- **Hindi** (Professional)
- **Marathi** (Native)
